

Celltac ES

Automated Hematology Analyzer

MEK-7300K

**WBC 5-part diff. model
FOR EVERYONE**

Fighting Disease with Electronics

 **NIHON KOHDEN**

MEK-7300

Methodology and Effectiveness

WBC differentiation by low cost non-staining method

Flow cell

Flow cell with Fresnel lenses

WBC is differentiated based on the laser scattering technology

Three scattergrams

1. MAIN scattergram

Differentiates lymphocytes/monocytes + basophils/neutrophils + eosinophils

2. NE-EO scattergram

Differentiates neutrophils/ eosinophils

3. MO-BA scattergram

Differentiates monocytes/ basophils

Case of Thalassemia

We compared RBC-related blood cell counts and histograms for thalassemia and iron-deficiency anemia. Then we found difference in the RDW-SD of thalassemia and iron-deficiency anemia patients while RDW-CV and histograms do not show such significant differences.

Iron-deficiency anemia:

Peripheral blood smear

RBC (x10 ⁹ /μL)	HGB (g/dL)	HCT (%)	MCV (fL)	RDW-CV (%)	RDW-SD (fL)
457	11.1	35.2	77.0	21.5	66.2

RBC Histogram

Reference Interval:
RDW-CV 11.6-14.0%
RDW-SD 39.0-46.0 fL

Thalassemia:

Peripheral blood smear

RBC (x10 ⁹ /μL)	HGB (g/dL)	HCT (%)	MCV (fL)	RDW-CV (%)	RDW-SD (fL)
681	12.0	38.4	56.4	23.6	53.2

RBC Histogram

Reference Interval:
RDW-CV 11.6-14.0%
RDW-SD 39.0-46.0 fL

Reagent management

Reagent management system of Celltac Es provides easier reagent bottle management with a unique barcode label printed on each reagent box or bottle. With this feature, testing quality is maintained at a consistently high level.

Photo: MEK-9100

Standard accessory, barcode reader

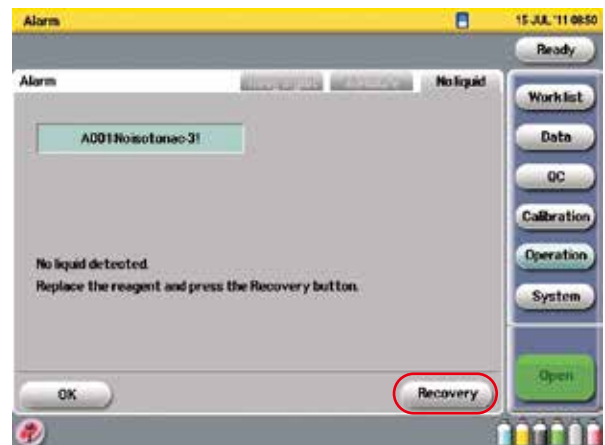

Closed mode for safe operation

The built-in cap piercing mechanism protects healthcare professionals from the risk of infection. It maintains a high standard of operating safety in the laboratory.

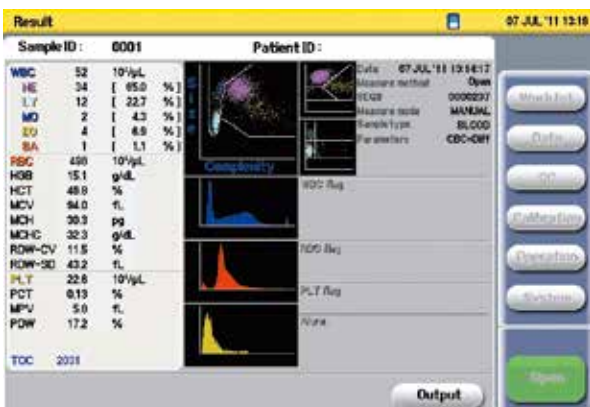

Operational guidance function

If the analyzer detects a problem, it displays an alarm message with a sound. When recovery key is pressed, the analyzer automatically removes the cause of the alarm.

Large screen for easy viewing

The user can see all necessary information at a glance or focus on different areas like zooming into scattergrams, histograms, or the numeric values.

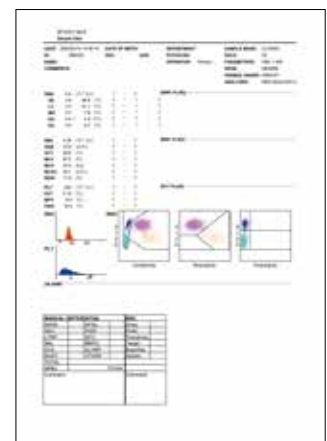

Example of printing

A built-in printer or a data management system installed on a PC can print out results.

Internal printer

External printer

Celltac^{ES} MEK-7300K

Specifications

■ Dimensions and Weight:

Dimensions: 382 W x 465 D x 532 H (mm)
Weight: 35 kg ±10%

■ Power Requirements:

Line voltage: AC 100 to 240 V
Power input: max 250 VA

■ 23 Reportable Parameters:

WBC, RBC, HGB, HCT, MCV, MCH, MCHC, RDW-CV, RDW-SD, PLT, PCT, MPV, PDW, NE, NE%, LY, LY%, MO, MO%, EO, EO%, BA, BA%

■ 2 Research Parameters:

IG, IG%

■ Throughput:

Approx. 60 samples per hour (CBC + DIFF)

■ Patient Memory Capacity:

Up to 15,000 patient data (including MEK file, CSV, and histogram) in SD card as QM-002D

■ Sample volume:

- CBC: 30 µL
- CBC + DIFF: 55 µL

■ Barcode Format

Acceptable formats with or without check digits:
Industrial 2 of 5, ITF, JAN/EAN/UPC, NW-7, CODE39, CODE93, CODE128

■ Operating Environment

Temperature: 15 to 30°C (59 to 86°F)
Humidity: 30 to 85% (non-condensing)
Atmospheric pressure: 700 to 1060 hPa (altitude: < 3000 m)

Consumables and Accessories

Diluent

MEK-640 or MEK-641
Isotonac-3 Isotonac-4

Hemolyzing reagent

MEK-680
Hemolynac-3N

MEK-910
Hemolynac-5

Detergent

MEK-520
Cleanac

MEK-620
Cleanac-3

Hematology control for 5 part DIFF

MEK-5DL/5DN/5DH

Hematology calibrator

MEK-CAL
